PROFESSIONAL SUMMARY

Systems engineer and analyst who turns operational and time-series data into measurable operating improvements. Cornell M.Eng. in Systems Engineering and UBC B.Sc. in Mathematics, with three internships where the analysis led straight to action: root-caused data failures across linked operational systems and rebuilt the reporting that fixed them, automated reconciliation and settlement verification against the general ledger, and standardized reporting workflows for 8% team efficiency. Fluent in Excel, SQL, and Python for reporting automation; builds SARIMA and Holt-Winters forecasts with explicit uncertainty; communicates directly with clients and management. Targeting energy markets — IESO demand response and capacity auction operations.

EDUCATION

Cornell University

Master of Engineering in Systems Engineering

Ithaca, NY
Sep. 2025 – May 2026

University of British Columbia

Bachelor of Science: Major in Mathematics

Vancouver, BC
Sep. 2021 – June 2025

- Relevant Coursework: Optimization, Linear Programming, Time Series Analysis, Statistical Inference & Hypothesis Testing, Stochastic Calculus, Relational Databases.

PROFESSIONAL EXPERIENCE

Aifuku

Data Science Intern

Toronto, ON
Jan. 2025 – May 2025

- Analyzed operational data across 5 linked entities — receipts, line items, inventory movements, production batches, and customer orders — identifying trends and root causes of data failures, then presented findings and recommended fixes to non-technical stakeholders.
- Turned that analysis into action: automated statement-to-ledger reconciliation with a pipeline that parsed source documents into structured transaction records and verified them against the general ledger, replacing manual entry; wrote SQL across a 9-table database and maintained Metabase dashboards and KPI reporting for the operations team.

Grow Investment Group

Institutional Sales Department Intern

Shanghai, China
May 2024 – Aug. 2024

- Automated cross-referencing of multi-source records in Python to complete institutional client due diligence questionnaires, maintaining client registration and disclosure data accurately and on time while cutting manual processing 15%.
- Monitored market conditions and produced written performance and market reports plus client-facing education materials, owning the customer-communication side of the program; it contributed to 9% fewer client redemptions, 4% more inquiries, and 12% higher conversion.

Sinolink Securities Co., Ltd.

Investment Banking Intern

Shanghai, China
June 2023 – Aug. 2023

- Standardized and documented data collection, verification, and reporting workflows with senior analysts, eliminating duplicate entry and improving team efficiency 8%.
- Reconciled multi-year statements against company ledgers with rigorous attention to detail to identify and escalate discrepancies, and reported performance and risk metrics to internal decision-makers.

PROJECT EXPERIENCE

Time-Series Demand Forecasting (Canadian Labour Hours) | *R, SARIMA, Holt-Winters*

- Built and validated seasonal ARIMA and Holt-Winters models on operational time series, tuning by AIC and reporting 95% prediction intervals so decision-makers could act on forecast uncertainty, not just the point estimate.

Operational Performance & Root-Cause Analysis | *SQL (DuckDB), Excel*

- Analyzed 99,441 transactions to quantify an 8.1% service-failure rate and trace its downstream impact on customer satisfaction, alongside a BRL 7.98M revenue concentration, and delivered an executive scorecard prioritizing the fixes.

SKILLS

Analysis & Reporting: Strong analytical skills across operational, event, and time-series data; trend analysis; root cause analysis; performance reporting; settlement and transaction reconciliation and verification; data validation and quality control; forecasting (SARIMA, Holt-Winters, prediction intervals); statistical inference and hypothesis testing; regression; optimization and linear programming

Tools: Microsoft Excel (pivot tables, lookups, modeling, large operational datasets), SQL (PostgreSQL, Oracle SQL, DuckDB), Python (pandas, NumPy), R, Power BI, Tableau, Metabase, BI tools and reporting automation, ETL, Git

Process & Operations: Workflow and SOP documentation, process standardization and improvement, program and registration data maintenance across systems, issue triage and escalation, cross-functional and partner coordination, customer-facing reporting

Working Style: Self-starter who turns data and results into practical, measurable improvements; clear written and verbal communication including direct customer contact; managing multiple priorities in a fast-paced environment; comfortable finding solutions in ambiguity. Languages: Mandarin Chinese (Native), English (Professional), Japanese (Basic)
